NEPTUNE DRY ICE TECH

LOOKS COOL, BUT FEELS RED HOT!

With winter upon us many divers turn to their drysuit to keep them warm, or layer up with Sharkskin. With this in mind Neptune set out to build the ultimate cold water suit. A cross between a drysuit and a wetsuit, one that offers Level 9 thermal protection...
introducing the Dry Ice Tech.

WARMTH

The primary function of any wetsuit or drysuit, is to keep you warm. While there is a lot of hype about the science of wetsuit design, it all comes down to restricting the water flow into and out of the wetsuit and the thickness and quality of the neoprene. Neptune has a scale of 1 to 10 that defines the thermal protection that all suits offer and our goal was to produce a Level 9 suit, just one step down from a drysuit. The number one area that lets water into a wetsuit is the neck and the fastest place to lose body heat is through the head and the neck area, so in order to maximise warmth the best option is a hood attached suit. Add a rear shoulder entry zip and a high tech sealing system to keep water out and you have a semidry suit almost as dry as a dry suit. Made from the highest quality 7mm neoprene, Neo Tech Radial Stretch, this suit will keep you warm in almost any waters from Tasmania to Queensland.

COMFORT

It can be difficult to combine comfort with the warmth of a 7mm suit, but the Dry Ice Tech has achieved just that. It starts with the neoprene, 7mm Neo Tech Radial Stretch that takes the Dry Ice Tech to new levels of flexibility, it has the warmth of a 7mm suit but is much more flexible and comfortable than many 5mm suits. Secondly, we have spent countless hours creating a unique fit for the hood that is extremely comfortable and being made of Neo Tech Radial Stretch, it has almost unrestricted movement.

The Dry Ice Tech is the first wetsuit incorporating our new body fit system.

DURABILITY

Quality Neo Tech Radial Stretch neoprene ensures durability, in conjunction with our latest Protec II knee and elbow pad designs, for the two highest wear areas. Neptune also uses the highest quality glues, stitching and procedures to ensure consistent quality and durability of the wetsuit.

COOL NEW LOOK

While the primary purpose of your wetsuit is to keep you warm, looks do matter. The all black suit with fantastic, technical looking textures and graphics will make you look cool but feel warm in your new Dry Ice.
