

Pro QDi3

The Pro QDi3 is the first BCD that incorporates i3 technology. For years, the Pro QDi3 has been an extremely popular BCD for novices and experts alike. Now, with the addition of i3 technology and fresh, new cosmetics, its popularity is sure to soar.

Sea Quest i3 from Aqua Lung

The Sea Quest i3 is an innovative, new inflation system found exclusively in Sea Quest BCD's. Its greatest asset is its simplicity and how intuitive it is to use. Move the lever up to go up; push it down to go down. What could be easier? What's more, when dumping air from the BCD, the i3 opens all of the new Flat E-Valves at once. Gone are the days of deciding which valve to reach for based upon your orientation in the water.

Safe - The i3 allows you to take control of your diving. Mastering buoyancy control is one of the most difficult skills to learn. The i3 not only makes the skill easier but eliminates potential out-of-control-ascents caused by a diver reaching for the wrong dump valve. The i3 also allows for rapid location and activation of the inflator to establish buoyancy at the surface in case of an emergency.

Easy - The i3 is simple and intuitive. Move the lever up to go up; down to go down

Convenient - Unlike a traditional inflator at the end of a floppy hose, the i3 never moves. It is stationary at the same location where your left hand normally rests. It is always in the right place at the right time.

Reliable - The i3 does not utilise pneumatics or hydraulics to activate the Flat E-Valves. Therefore, there is no possibility of failure due to leaks. Using push-rod technology, as found in aircraft, the design remains simple and robust.

Fun - The i3 is just plain fun to use.

- Intuitive design makes buoyancy control safer and easier
- Opens upper and lower dump valves simultaneously. No more thinking about which dump valve to reach for.
- Over-molded lever prevents gloves from slipping off while using
- Increased flow rate over traditional inflators. Allows you to fill your BCD faster
- Attached dust cap prevents contaminants from entering mechanism when not in use
- The i3 uses fewer parts and is easier to service compared to standard inflators
- Using the new LP hose grip, the LP hose can be attached or removed while wearing the BCD.

This will satisfy instructional agency requirements to disconnect and reattach LP hose while training

features

- ▶ Integrated i3 technology for safer and easier control of inflation and deflation
- ▶ One-way valves prevent water from back flushing into the BCD, greatly reducing captured water
- ▶ The oral inflator is easy to deploy and use. It can easily be removed to provide an access port should you ever need to rinse the inside of your BCD
- ▶ A new, integrated Octo-pocket (patent pending), is a convenient way to secure your octopus regulator
- ▶ A three-dimensional expanding gusset around the backpack (patented) provides increased lift capacity
- ▶ Outer bladder constructed of Armorshield Cordura© for increased wear and fade resistance
- ▶ Sculpted shoulders using the exclusive Sea Quest swivel buckle system (patented) provides unsurpassed fit and comfort
- ▶ Traction pad (patented) built into the proprietary contour back pack prevents cylinder slippage
- ▶ Over-molded carrying handle makes carrying the BCD a breeze. Standard on all sizes
- ▶ Knife grommets on left lobe accommodate any one of the fine Deep See knives

sizes

XS, S, M, ML, L, XL, XXL

colours

Black/Silver, Black/Red

Type of BC	ADV style wrap-around jacket
Fabric	Armorshield? Cordura,
Weight System	Sure-Lock© mechanical weight release system,
Waistband	Depth compensating
Back Pack	Contour pack with traction pad (2 sizes)
Pockets	2 10lb weight pockets on sizes XS ? ML. Two 16lb weight pockets on sizes L - XXL
	2 side-release non-ditch pockets (except XS)
Clips	2 nylon D-rings, 2 angled

Dump Valves

1 upper right shoulder, 1 upper and 1 lower Flat E-Valve
